FRESH FISH PROCESSING SINK

Available in three standard sizes, or custom fabricated to your specifications, each sink is pre-plumbed and pre-wired for easy installation.

This totally integrated work station with trim boards, spray rinse faucet, lever wastes, transition cylinder with cover, and a Salvajor disposer is manufactured with 16 gauge, 304 series stainless steel. Grooved poly cutting boards attach to the sink at an angle to easily move waste into a pitched trough behind the bowls where the scrap is carried directly into the heavy duty Salvajor disposer. Especially designed for processing seafood waste, the disposer features a rugged 5 horsepower motor, a large 8" rotor with fish bars, and a "Positive Flush" system, which virtually eliminates drain clogging.

All models are equipped with a 5 H.P. Salvajor Disposer featuring 8" rotor with fish bars and special ARSS-LD control. The adjustable "sizing" rotor/turntable compensates for wear while the automatic reversing feature increases the life of the rotor/turntable up to 75 percent. The automatic positive flush feature flushes the drain line and lower bowl of the disposer up to five minutes after the disposer is turned off. The disposer also features exterior de-jamming, an emergency disconnect switch, an air-cooled heavy duty motor and solid cast steel construction for low maintenance and long life

MODEL NUMBERS WITH DISPOSERS:

MODEL	LENGTH	WIDTH	HEIGHT	DISPOSER MODEL#
FFPS-78	78"	36"	37"	500-SA-S-6-ARSS-LD
